1 Introduction

The Communications Authority of Kenya (hereinafter referred to as the Authority) is established under the Kenya Information and Communications Act, 1998 to license and regulate Postal, Information and Communications services in Kenya.

The Authority's objectives and mandate are spelt out in the Kenya Information and Communications Act, 1998 and ICT Sector Policy Guidelines.

The objectives include *inter alia*:

- a) To contribute to overall Government objectives towards human, social and economic development through facilitating universal access and use of ICTs.
- b) Further the advancement of technology relating to the ICT sector;
- c) Promote development of ICT systems and services in accordance with recognized international standards, practices and public demands;
- d) Foster growth, competition and investment in the sector;
- e) Protect the rights of users of ICT services;
- f) Ensure the development and formulation of adequate standards for the ICT sector in the country; and
- g) Ensure operators' compliance with the Act, Regulations and Licensing Conditions;

Some of the specific tasks undertaken by the Authority in relation to its mandate include:

- a) Licensing and regulating all systems and services in the ICT sector, including radio-communications, telecommunications, postal/courier services, broadcasting, multimedia, electronic commerce and transactions services;
- b) Facilitating the development of electronic commerce (E-Commerce) and transactions;
- c) Protecting consumer rights within the ICT environment;
- d) Managing competition in the sector to ensure a level playing ground for all players;
- e) Monitoring the activities of licensees to enforce compliance with the license terms and conditions as well as the law.

2 Promotion of E-Commerce

In considering the promotion of E-Commerce and other online transactions, the Authority takes note of the important role of the Internet and its potential in enhancing such businesses as logistics and supply chain management. This provides immense opportunities for postal and courier operators.

A typical E-commerce environment is illustrated in the figure below:

E-COMMERCE AND SUPPLY CHAIN MANAGEMENT

It is however noted that the uptake of E-Commerce is still low despite the high growth in various ICT related services in the country. It is with this in mind that the Authority has developed these guidelines whose objective is to facilitate the uptake of E-Commerce in the country.

These guidelines are aimed at boosting consumer confidence in e-commerce by requiring Postal/Courier operators to implement mechanisms that provide for, among others, remote payment options, enhanced security for packages, tracking of packages and compliance with set delivery standards.

3 Specific Guidelines

The following are guidelines intended to specifically promote E-Commerce:

I. Remote Payment Guidelines

All Postal/Courier licensees are required to put in place procedures by which customers can pay for services remotely. These procedures entail incorporating a secure remote payment platform through a licensed financial payment services provider. Licensees are at liberty to implement a payment option that accords them the greatest flexibility in their operations.

II. Security Guidelines

All operators are required to ensure their operations conform to the security standards set out in the Postal Security Guidelines. These are outlined in Annex 1(A&B).

III. Delivery Standards.

These guidelines relate to maximum expected timelines to be met by licensees when delivering parcels on a non-expedited basis. The parcel delivery geographical area is defined as, a County, a County Headquarter or an Urban Centre within a county. The delivery timelines are defined in terms of days.

These standards therefore dictate the maximum timelines to be met while transporting parcels within a County or between Counties. Licensees may choose to offer expedited parcel delivery which shall exceed the minimum set delivery standards for ordinary/non-expedited delivery. The ordinary/non-expedited delivery standards are set out in Annex 2.

IV. Guidelines on Tracking of Postal Items

These guidelines relate to the measures licensees should put in place to enable their customers ascertain the status of their packages prior to delivery. The objective is to enable customers ascertain the location of packages and expected time of delivery.

a. Inbound and Outbound International Packages

This relates to all packages transported into or out of the country. International Courier Operators are required to put in place electronic automated mechanisms by which a customer can track their package to ascertain its location. The automated mechanism should be able to:

- i. Indicate the time and location a package was received by the courier.
- ii. The current estimated location.
- iii. The expected delivery location and estimated delivery time.

Automated mechanisms may take the form of, but not limited to:

- Proprietary web-based tracking systems
- Email-based tracking systems/updates.
- SMS-based tracking systems/updates.
- IVR-based tracking systems.

b. Local Packages

This relates to all packages transported within the country. National Courier Operators are required to put in place either automated or non-automated mechanisms by which a customer can track their package to ascertain its location. The automated mechanism should be able to:

- i. Indicate the time and location a package was received by the courier.
- ii. The current estimated location.
- iii. The expected delivery location and estimated delivery time.

For non-automated mechanisms, a National Courier operator may choose to either:

- Set up a Call Centre or
- Provide a Customer Care telephone number for tracking enquiries.

National Courier operators may choose to incorporate automated tracking mechanisms.

Annex 1

A: Postal/Courier Security Management Framework

| | Proposed Standards/Measures | Rationale | Responsibility |
|----|--|--|----------------|
| 1) | Mail shall not be left unattended or in an insecure environment at any time and must be kept in secured receptacles, under guard, CCTV or other monitoring | Unsecured mail has been the cause of mail loss, pilferage and theft. | All Operators |
| 2) | All staff shall be trained in security /training with a security champion. The training areas should include: • Basic postal security and investigations • Emergency planning and risk assessment • Airport security coordination and quality of service/security reviews • Countering of drug trafficking and money laundering through the post • Procedures for accepting and controlling the induction of dangerous goods • Identification of prohibited goods • Revenue accounting and protection | Lack of requisite training has been the cause of inefficiency and admittance of illegal and prohibited items into the postal/courier network | All Operators |
| 3) | High-risk mail comprising of insured and valuable items e.g. lab samples, specimens, medicines etc. shall be afforded appropriate protection through such measures as insurance, tracking etc | Safety of critical items in the network requires additional guarantees. | All Operators |

| | ELINES/LCS/001P/2015 | | |
|----|---|--|------------|
| 4) | Systems shall be taken to prevent unauthorised persons from accessing operational sites. Such systems should include provision of staff photo IDs, name cards and | Security threats are real in the country and should be | All |
| | | forestalled. | Operators |
| | security passes. | Torestaneu. | |
| 5) | | TPI 1 1 | A 11 |
| 5) | Deployment of effective supervisory checks to safeguard mail. This shall be done | There have been many | All |
| | through declaration of contents and obtaining identification details of senders at points | cases of operators accepting | Operators |
| | of acceptance among other measures. | for transmission offensive | 1 |
| | | and scurrilous materials | |
| | | whose senders cannot be | |
| | | traced. | |
| 6) | Equipment used to deliver mail shall be given adequate security at all times through | Cases of attack on mail | All |
| 0) | | vehicles and theft of mail in | All |
| | such measures as satellite-tracking of mail vehicles and lockable receptacles for mail, | | Operators |
| | among others. | transit have been reported | |
| 7) | An annual risk assessment shall be conducted to identify each critical facility. The | Risk assessment and critical | Designated |
| | assessment shall take into consideration the postal/courier assets and operations at the | facility security plans | |
| | facility, the general crime rate of the area and other contributing factors that increase the | | Operator |
| | likelihood of criminal incidents. | | |
| | For each critical facility, a detailed written security plan shall be developed and maintained. | | |
| | The security plan shall contain the following control measures: | | |
| | | | |
| | - facility design standards; | | |
| | -perimeter barriers; | | |
| | -perimeter windows, doors or other openings; | | |
| L | 1 | | |

|----------|--|------------------------------|------------|
| | -lighting; | | |
| | -locking mechanisms and key controls; | | |
| | | | |
| 8) | All critical facilities shall be constructed to conform to national design standards for safety | Critical facility design | Designated |
| | and security and contain resilient materials to preclude illegal entry. | standards | Omenator |
| | A designated program of annual inspection and repair shall be conducted to assure the | | Operator |
| | integrity of structures including timescales for completion of any repair. The annual | | |
| | inspection shall also include a risk assessment of the immediate vicinity, the profile of the | | |
| | mail product being processed and any other changes in the operation that may affect the | | |
| | security of the building and its employees. | | |
| | | | |
| | | | |
| 9) | Physical barriers such as fencing, walls, and vehicle gates shall be installed to deny access | Perimeter barriers | Designated |
| | of un-authorized individuals or vehicles to restricted areas of the critical facility. | | Omenator |
| | Perimeter fences or dividing walls shall be set back from the critical facility (to increase the | | Operator |
| | likelihood of observing intruders attempting to breach the secure area). The areas adjacent | | |
| | to the perimeter fencing shall be kept free of debris, trees and shrubbery (so they cannot be | | |
| | used to violate the secure area). Weekly inspections of the perimeter barriers shall be | | |
| | conducted to ensure their integrity. | | |
| 10) | An adequate access control process shall be put in place for secure (non-customer) areas of | Access control systems for | All |
| | all critical postal facilities. | employees, visitors, service | |
| | A manual access control system shall be implemented: | providers and vendors to | Operators |
| | i. uniformed security guards, a receptionist or other personnel staff shall be at entry/ | ensure admittance of | |
| | exit points to verify the entry privileges for each individual; | authorized personnel only. | |
| | ii. the manual process shall be documented in a standard operating procedure; | | |
| | | | |

| GOIDE | iii. training and instructions shall be provided to the respective personnel administering | | |
|-------|--|----------------------------|---------------|
| | the system and the individuals stationed at the fixed access control point; | | |
| | iv. a registration system shall be maintained to record entries of non-employees into | | |
| | secure areas of the critical facility. | | |
| | In addition, an automated (electronic) or hybrid access control system shall be implemented | | |
| | in areas deemed to be of high risk. | | |
| | The system shall be designed to prohibit unauthorized entries of individuals through the | | |
| | entry/exit points and only through a single access system or process and shall be a single | | |
| | access system to only permit entry for the respective badge holder which activates the | | |
| | access point. | | |
| | A visitor registration system shall be implemented to record entries of non-employees into | | |
| | secure areas of the critical facility. | | |
| 11) | Only official vehicles or approved contract vehicles shall be permitted in areas used to | Access control systems for | Designated |
| | load/transport mail or other secure exterior operations areas. | vehicles to premises to | |
| | Entrance to these areas shall be clearly marked and placarded to ensure awareness of the | ensure no illegal entry. | Operator |
| | boundaries of the restricted area. | | |
| | A manual or automated access control system shall be used to ensure unauthorized vehicles | | |
| | do not gain access into the secure exterior operations area. | | |
| | If it is necessary for a non-official vehicle to enter the secure exterior operations area, a | | |
| | procedure shall be in place to verify the identity of the driver and if necessary to inspect the | | |
| | vehicle before entering the secured area. | | |
| | Employee parking areas shall be assigned a location separate from the vehicle operations | | |
| | areas. Visitor parking shall be separate from secure vehicle operations areas. | | |
| 12) | A personnel and visitor identification system shall be implemented to allow for positive | Identification systems | All operators |

| | identification of employees and visitors when entering the critical facility. | enhanced to control entry by | |
|-----|--|------------------------------|---------------|
| | Postal personnel (career, temporary or contract employees) shall be provided with easily | unauthorized persons | |
| | identifiable identification badges featuring their legal name as documented in the Human | | |
| | Resource system, their unit/department, role, photograph and expiration date. | | |
| | The Postal Security Unit or other postal managers shall be responsible for the control, | | |
| | issuance and removal of employee, visitor and contractor identification badges. A process | | |
| | shall be maintained to report and communicate employee information. | | |
| | An authorized permit system shall be used to identify all vehicles while operating in any | | |
| | secure exterior operations areas. The permit shall be current and visibly displayed. | | |
| 13) | The personnel selection and hiring policy shall be documented for all employees working | Personnel security and | Designated |
| | within the facilities of the DO or handling mail at external locations. | hiring processes : to ensure | |
| | The hiring policy shall be consistent with national legislation to ensure prospective and | integrity of staff handling | Operator |
| | current employees and contractors qualified to perform postal duties as a person of | mail | |
| | integrity. Background screening (criminal history or police checks) for all career employees | | |
| | shall be conducted consistent with national legislation. | | |
| | A process shall be maintained to report and communicate employee performance and | | |
| | misconduct. | | |
| | The hiring process shall include interviews, pre-employment data verification and other | | |
| | screening measures commensurate with positions or duties. | | |
| | The termination process shall be documented for employees and contractors to ensure | | |
| | the timely return of identification documents, access control devices, keys, uniforms and | | |
| | other sensitive information. A record system shall be maintained to prevent re-hiring of | | |
| | terminated employees or contractors. | | |
| 14) | Security awareness training programs shall be documented and maintained for all | Awareness and training | All operators |

| | (NCASP). As a minimum, the NCASP should reflect the Standards and Recommended |
| | Practices set forth in ICAO Annex 17 and the guidance material in ICAO Aviation Security |

o EDD;

Manual, Doc 8973.

- o EDS:
- o ETVD;
- o manual search;
- o metal detection;
- - X-Ray equipment or other wave based systems
- Mail that requires additional security measures beyond baseline procedures, such as visual inspection or single aspect screening, to be applied to it is considered high risk. Mail or mail items can be considered high risk if there are:
 - anomalies in its nature that give rise to suspicion such as evidence of tampering;
 - due to its nature, baseline security measures alone are unlikely to detect dangerous goods as defined in the UPU and CA regulations;
 - specific intelligence or threat information about it;
 - reasons to suspect that it contains or poses a threat based on risk assessment by an appropriate authority for aviation security, aircraft operators or other actors in the supply chain.

The DO or designee shall screen (EDS or X-Ray) high-risk items:

High risk items that could pose potential security risks especially terror related in the region.
