PRELIMINARY NOTES

This report is based on data provided by licensees in the ICT sector as per their license conditions and obligations.

The information provided in this report is subject to review during the subsequent quarter in case of any revisions or updates from the licensees.

The Authority developed and published a manual on definitions and methodologies of collecting and reporting administrative data on Telecommunication indicators. The Manual, which was prepared in consultation with the International Telecommunications Union (ITU) is available on <https://ca.go.ke/wp-content/uploads/2020/03/ICT-Indicators-Manual-2019-.pdf>

SUMMARY OF ICT INDICATORS

This Second Quarter Sector Statistics Report for the 2022/23 Financial Year provides the performance and trends in the ICT sector for the period 1st October to 31st December 2022 in:

1. Mobile networks services
2. Fixed network services
3. Courier services
4. Broadcasting services
5. Frequency spectrum management
6. Electronic transactions and Cyber space management

1.2 Machine-to-Machine Subscriptions

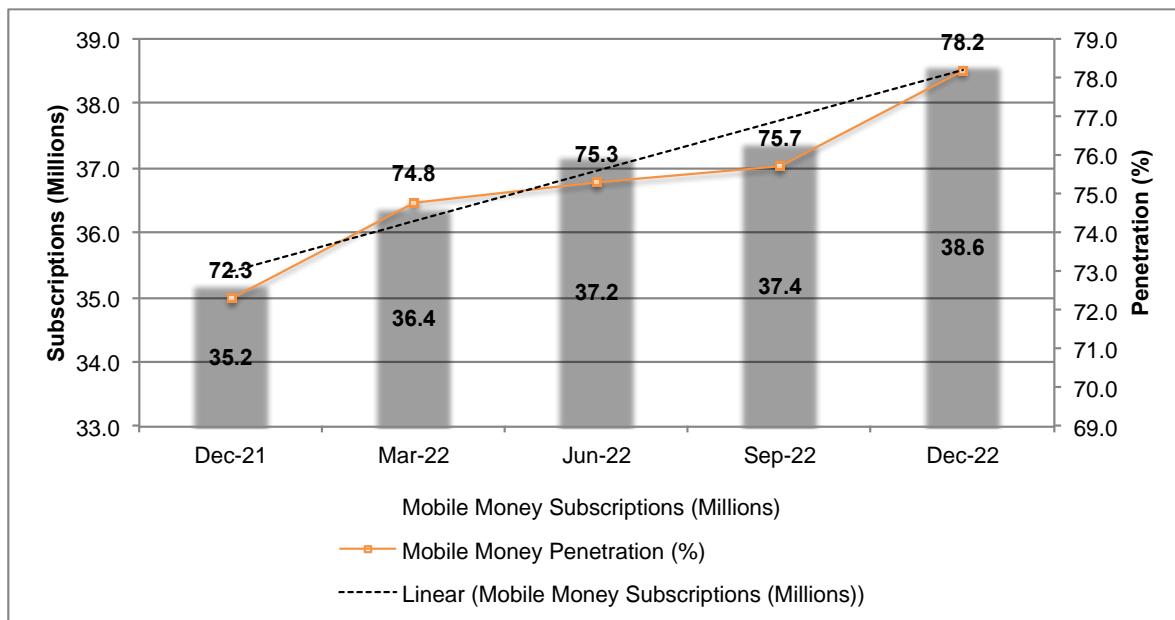

The number of SIM cards used to facilitate communication between machines such as car tracking services stood at 1,510,236 as at 31st December 2022.

Source: CA, Operators' Returns.

Figure 3: Machine-to-Machine Subscriptions

1.3 Mobile Money Services

The uptake of mobile money services remained steady with the reference period recording 38.6 million subscriptions up from 37.4 million recorded during the previous period, representing a penetration rate of 78.2 percent.

Figure 4: Mobile Money Services

1.4 Mobile Data and Broadband¹ Services

The total mobile data/Internet subscriptions stood at 47.7 million during the reference period, out of which 66.8 percent were on mobile broadband. Data/Internet users have embraced higher mobile network generations such as 4G that offer faster Internet speeds that enhance customer experience.

1.7 Domestic Mobile Voice Traffic (Minutes)

The total outgoing domestic mobile voice traffic increased by 10.1 percent to post 20.8 billion minutes from 18.9 billion recorded in the previous quarter. The growth is attributed to the various voice promotions and special offers launched by the market players during the period coupled with long school holidays and the festive season.

1.8 Minutes of Use per Call per Operator

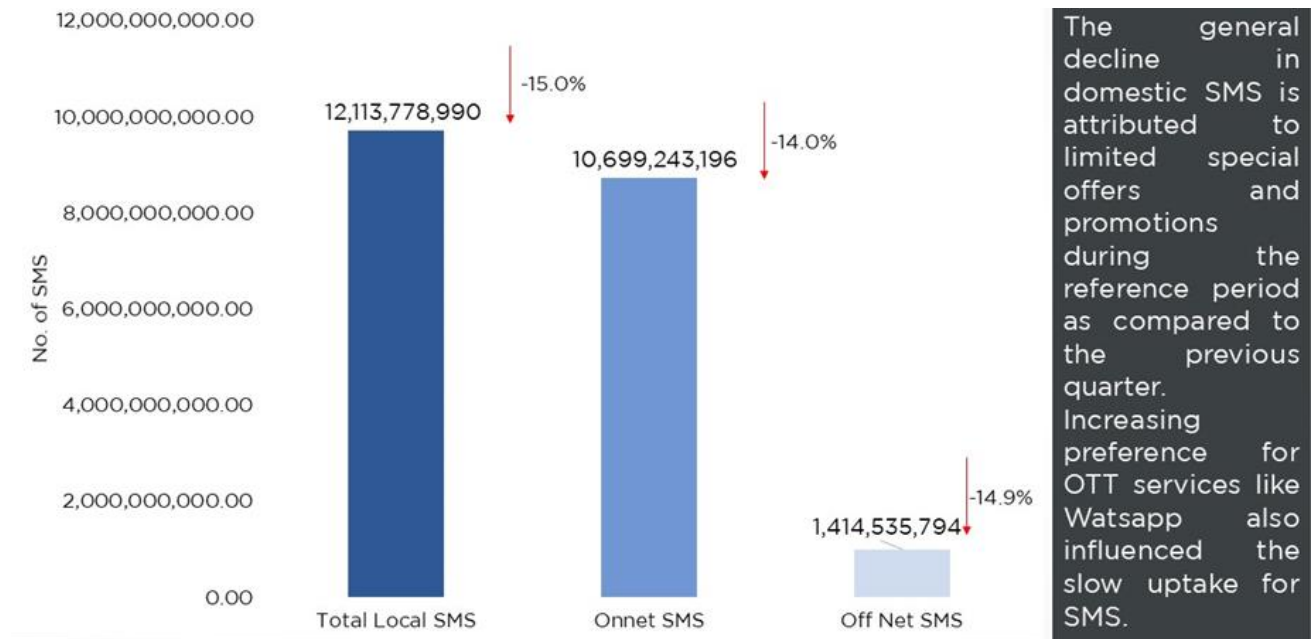

Customers on Airtel Networks spent more time on a single on-net call averaging 2.8 minutes. Further, Telkom Kenya Ltd and Equitel customers recorded the highest average Minutes of Use per off net call at 1.3, mainly attributed to the lower calling rates offered by the operators.

1.13 International Mobile Traffic

International incoming mobile voice traffic declined by 3.4 percent whereas international outgoing mobile voice traffic rose by 4.6 percent during the reference period. International incoming and outgoing mobile SMS declined by 5.6 and 6.1 percent to 8.6 million and 4.7 million messages respectively. This is mainly as a result of increased preference for OTT channels such as Whatsapp and availability of lucrative special offers and promotions for data bundles that facilitate access to OTTs.

1.14 Roaming Traffic

The trends in outbound and inbound roaming traffic are as shown in *Tables 5 and 6*. Notably, both in-bound and outbound traffic from Tanzania and Burundi remained low, which is attributed to the fact that the two countries are yet to join the One Network Area initiative in the region.

7. CONCLUSION

The period between October to December 2022 was marked by a myriad of activities, which included the national examinations, long school holidays, Christmas and New Year festivities. These activities coupled with lucrative promotions and special offers launched by the various operators played a key role in driving the increased uptake for ICT services especially mobile voice traffic and data services.

The government is strongly committed to the advancement of the digital superhighway and infrastructure expansion in its digital transformation agenda. The continued roll-out of the 5G network, coupled with the landing of the PEACE cable, will enable consumers to access super-fast Internet speeds, particularly in areas with high population density, and for linking connected devices, such as in manufacturing and healthcare.
